Environmental Performance of Buildings : Reassessing the Notion of Assessment 建物の環境性能：評価概念の再検討

2026年5月25日(月)15:30-17:30 (15:00 開場)

東京大学生産技術研究所 A棟2階 コンベンションホール
東京都目黒区駒場4-6-1 <https://www.iis.u-tokyo.ac.jp/ja/access/>

講師: Prof. Raymond Cole, レイモンド・コール教授
(Professor Emeritus University of British Columbia)

For the past 30 years, building environmental assessment systems have been promoted as the most effective means to objectively evaluate a building's environmental merits. However, most are based on reductive science, and their success is typically cast in terms of the number of buildings "certified." This presentation contrasts these characteristics with the emergence of "regenerative" design that carries the ambition that buildings can be designed to add ecological, social and economic value to the places they are situated. This more expansive and complex systems view of the built environment raises new questions about how one measures performance, progress and success.

講演会終了後、懇親会も予定しています。講演お申込みの方は懇親会の出欠もお知らせください。

講演会：無料 先着：100名
懇親会：5000円 18:00-

ご予約
